SUMMARY

Full-stack engineer and SaaS founder with 2+ years of hands-on experience building and shipping production-grade web applications, AI-integrated platforms, and real-time systems. Adept at owning features end-to-end — from requirements scoping to deployment — across fast-paced, collaborative environments. Selected for YC Hackathon (top applicants globally); GDG Hackathon winner.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (ES6+), C++, C, Dart, PHP
Frontend:	React.js, Next.js, Flutter, Tailwind CSS, HTML5, CSS3, PWA
Backend:	Node.js, Express.js, REST APIs, WebSockets, Socket.IO, Redis, Pub/Sub
AI/ML:	LLM Integration (OpenAI, Anthropic, Gemini, Llama), RAG, Prompt Engineering, TensorFlow
Databases:	Firebase Firestore, Realtime Database, PostgreSQL, Cloudinary
DevOps & Tools:	Git, Docker, Vercel, Render, CI/CD Pipelines, PostHog, MCP Servers
Core CS:	Data Structures & Algorithms, System Design, Distributed Systems, OOP

EXPERIENCE

Frontend Engineer Intern

NextRound Private Limited

Jun 2025 – Aug 2025

Remote

- Delivered 10+ production features used by thousands of active users, collaborating across product, design, and engineering in an agile sprint-based workflow.
- Engineered a cross-platform Chrome extension for real-time meeting transcription across Zoom, Google Meet, and Microsoft Teams, with live speaker attribution and low-latency processing.
- Integrated event-driven APIs to enable real-time frontend updates, measurably reducing API response latency and improving UI responsiveness.
- Participated in code reviews, sprint retrospectives, and iterative feature delivery cycles, maintaining consistent deployment velocity.

Web Developer

GeeksforGeeks KIIT Chapter

Feb 2025 – Present

On-site

- Designed, built, and maintained a student-facing platform serving hundreds of users for technical resources and event management.
- Shipped iterative feature improvements through continuous feedback cycles, increasing platform engagement and adoption.

Senior Technical Executive

FED, KIIT

Nov 2024 – Present

On-site

- Built internal tooling for large-scale event coordination and workflow automation for a 500+ member student organization, reducing manual overhead.
- Coordinated cross-functional peer teams to define requirements, assign deliverables, and ship systems on schedule.

PROJECTS

Linkit — Link-in-Bio & Digital Presence SaaS

linkitapp.in | GitHub (Private)

2025 – Present

- Built a Linktree/Beacons-style link-in-bio platform serving 200+ creators, freelancers, and entrepreneurs — enabling users to consolidate social profiles, portfolios, and storefronts into a single branded URL for Instagram bios, LinkedIn, and campaigns.
- Engineered a drag-and-drop bio page builder with custom theming, real-time click analytics, and audience growth tooling; integrated Cashfree payments and a no-code form builder for monetization workflows.
- Shipped **Linkit Studio** — an AI-powered creative suite allowing users to generate professional motion design videos and presentation slides from natural language prompts, extending the platform beyond links into full digital presence management.

C25Go — Indoor Navigation PWA

campus25fed.vercel.app | GitHub

- Shipped a Progressive Web App used by 15,000+ students for indoor campus navigation using shortest-path routing via Dijkstra's Algorithm.
- Architected an offline-first system with admin tooling for node/edge management and scalable deployment.

NuviBrainz — AI-Powered EdTech Platform

nuvibrainz.in | GitHub (Private)

2024 – Present

- Built an AI-powered JEE exam preparation platform with adaptive quizzes, personalized learning paths, and multi-LLM content generation across OpenAI, Gemini, and Llama.
- Owned full-stack architecture (React, Node.js, Firebase), product requirements definition, and iterative delivery to real student users.

Pigglu Khelega — Real-Time Multiplayer Game

Live | GitHub

2025

- Built a real-time multiplayer game using Socket.IO and Redis Pub/Sub, achieving sub-100ms state synchronization across concurrent players at scale.

OpenSource Hire — Developer Discovery Engine2025

opensourcehire.vercel.app | GitHub

- Built a developer discovery engine using the GitHub API to surface engineering talent from open-source contribution signals, replacing traditional resume screening.

Velocity Transit — Flutter Real-Time Transit App2025

GitHub

- Developed a multi-role Flutter transit app with real-time GPS tracking, live bus discovery, road-snapped route visualization, and Socket.IO + Redis-based operations infrastructure.

EDUCATION

Kalinga Institute of Industrial Technology (KIIT)2024 – 2028

B.Tech, Computer Science Engineering — AI/ML Specialization

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, OOP, Computer Networks, System Design, Discrete Mathematics.

ACHIEVEMENTS & LEADERSHIP

- **YC Hackathon** — Selected from 2,000+ global applicants; designed and shipped a full product under strict time constraints.
- **GDG Hackathon (Building Bad) — Winner**; demonstrated end-to-end product execution and cross-team collaboration.
- **Bangalore Startup Residency** — Participated in a growth-focused startup residency focused on product iteration and go-to-market strategy.
